### NEW TONNAGES OF NEVADA DOUGLAS

Pleased With the Opening of Property.

ORE MUCH INCREASED

Smelter Most Modern in the West.

mining engineers of the west, has a professional trip through Arizona, old Mexico, Nevada and other southwestern states, spending nearly a year away from his local headquarters. Just prior to reaching Utah, Mr. Humphries visited the Mason district to get into personal touch with conditions in

into personal touch with conditions in general, but with the Nevada Douglas copper properties in particular, in order to bring his report of these up to date.

To The Tribune vesterday Mr. Humphries expressed his surprise and grantication at the spiendid manner in which the ore tonnages of this copper mine had been extended by the recent work of blocking out the ore for permanent production and in cutting the various chutes. What was theretofore considered wall territory in many instances was shown to be narrow lenzes of rock separating the tonnage then developed from good-sized bodies of high-grade smelting ore. He was unwilling to give any estimate as to the greatly increased tonnages, however, reserving figures for the report to be submitted to the organization within a short time.

Economical Mining.

At the Douglas Hill section of the mine, where a large quantity of so-called spot ore, which is a sulphide, was known to exist, new and extensive tonnages have been added to the reserves, which vary in value from 5 to 20 per cent copper. The ore from this section is to be handled by a tramway from the tunnel to the railroad tracks, and at a minimum cost, as mining this tonnage, he states, will resolve liself into a simple quarry-ling proposition.

cost, as mining this tonnage, he states, will resolve itself into a simple quarrying proposition.

The company has met with equal success at the Ludwig section, and over the incline shaft the new electric hoisting could be shaft to the shaft is in shape for active service, all the stations as far down as the 550 level being in shape for stoping and continuous production. In breaking out the still floors at various points of the Ludwig a number of new ore bodies were uncovered, an especially pleasing feature of this work being a new body on the No. 2 south, consisting of carbonate ore, which is towards the Douglas Hill section.

This development would indicate strongly that eventually the bodies of the Ludwig and Douglas Hill sections may be connected, possibly showing an uninterrupted continuation of ore between the two. This adds greatly to the attraction of a vast terrifory of splendid promise, but which is now virgin.

Mr. Humphries speaks highly not only of this mine work, but also of the Nevada Copper Beit railroad line, and for pushing through this necessary accessory of the district so successfully, and during times not conductive to large financing, on the part of Walter C. Orem, general manager of the Nevada Douglas company. The road is ready to handle any tomage that may be required of it, having all the necessary equipment and with a yardage system at the new

ving all the necessary equipment a h a yardage system at the elter that is very complete. The smelter that is very complete. The company is meeting with fine success already, and it is handling 100 tons of gypsum daily for the Nevada Douglas company. In making a new cut near the Ludwig shaft the gypsum deposit, was uncovered rather unexpectedly in this new place, extending the limits of the deposit materially. When the company gets its gypsum crusher and loading system in shape for use this daily output will be much increased.

Mason Valley Ready

Mason Valley Ready

Mason Valley Ready.

Mr. Humphries also visited the Mason Valley mine and smelter. As could be expected, he found everything at this mine in excellent shape, with all underground in condition for continuous and large copper ore production. The ore bins at the mine, aerial tramway and other items of equipment are about ready for gervice, one of the additional items of equipment added being a large rock crusher at the mine.

An inspection of the work at the new smelter deroonstrated that fine progress is being made there, and that the initial furnace of 450 tons dally capacity will be ready to be blown in by December 10. Mr. Humphries says that no details have been overlooked at this plant, and the plant when in operation will demonstrate the advisability of many new features making for economy, such as the elimination of surplus labor for the tonnage handled. Mr. Humphries had nine years of experience at the Swansea smelters, and he says that the Mason Valley company is going to have one of the most complete and up-to-date plants in the western country.

# OPENS BIG BODIES

Taxing the Hoisting Ability of Property.

the Eagle & Blue Bell mine of Tintle has been the subject of considerable mment during the past month or two Pronounces the Mason Valley locally, and General Manager Imer Pett said Wednesday that the conditions un-

locally, and General Manager Imer Pett said Wednesday that the conditions underground were better than ever, the production of ore being limited only by the ability to extract it. Ore shipments are being made at the rate of four cars a week, eight cars having been shipped during the first two weeks of this month. Fifty tens could be marketed daily without much trouble were the holsting arrangements more satisfactory.

The management is taking this ore from the 1300-foot level. The new shall extends only to the 1000-foot level, the 200 feet of additional depth being obtained by means of winzes which retards operations as a matter of course. One of the near future bits of work to be done at this property will be the extension of this shaft to the depth required, although the territory adjacent to the 1000 level, and which can be operated in successfully without a deeper shaft, is showing indications at present which are highly encouraging.

On the 1300 level the management has driven through one for the past amety feet, and in ore place the stope is 20 feet in width, all the ore being of a shipping grade. Both faces of the drifts are still in ore, so the real extent is as yet unknown. A raise from the 1300 level has broken into one slightly below the 1200, and this looks as if it will make into something permanent.

Mr. Pett says that it should not take long for the management to line up its workings so as to form a more comprehensive idea of the resources of the mine than heretofore had, and, as stated, both depth and that part of the mine within easy reach of the 1000 level right now appear full of very striking promise.

#### HIGHER PRICED STOCKS DEALT IN WEDNESDAY

The principal feature of the trading Wednesday on the local exchange was he unexpected manner in which many of the higher-priced issues were in de-mand. This brought the value of the 2,950 shares of stock dealt in to \$23,-

### EAGLE & BLUE BELL EASTERN OPINION ON BINGHAM CAMP

Gigantic Operations of the Utah Copper.

ROAD IS SCENIC ROUTE

Tribute Paid to Beautiful Surroundings of Salt Lake City.

o Bingham over the Bingham & Garfield ine gets is the immensity of the Utah mining operations, and the secand, that Sait Lake City should take advantage of this scente road to bring tourists to Bingham, thereby giving them an idea of the mineral resources of the state that they can ged in no other way. This point was emphasized on Wednesday by C. H. Cole, a prominent broker of Boston, who spent Tuesday at Bingham and Garfield, accompanied by R. C. Genmel, general superintendent of the Utah Copper company, and the members of the Nathan L. Amster party, of which Mr. Cole was one ists to Bingham, thereby giving them an

car, and on returning we coasted down the hill.

"The change since that day is truly remarkable, and I was much surprised at the tremendous magnitude of the Utah Copper mining, railroad, milling and smelting operations. It is evident that the officials of the Utah Copper company are certain of the ore tonnage and their ability to handle the same, or such expenditures of capital for mining and equipment would not have been made.

"The view from the Bingham & Garnield line is remarkable, and the tourist to your city should be urged to take that trip. I have never seen Salt Lake advertised as a place abounding in magnificent scenery, but you certainly have this great attraction. The view even from my hotel window this morning was line.

#### COPPERS HAVE LOST THEIR SNAP IN EAST

James A. Pollock & Co., bankers and brokers, furnish the following, received over their private wire yesterday after-

Paine, Webber & Co., Boston.—The New York market continued to sag again today and looks as if it would sell lower. The local coppers have lost their snap and the buy and sell orders just about balloves. Prices were unchanged all

and the buy and sell orders just about balance. Prices were unchanged all through the day and there was no attempt at liquidation. We think the position of the coppers is better than the New York list and that there is less risk in buying them.

Logan & Bryan, New York.—You are doubtless aware of the fact that shortly after the government filed its suit for dissolution of the steel trust, knowing as we did, of the substantial character of a goodly portion of the buying then in progress, that we advocated the purchase of standard rails, notably, the coalers. Harriman and Hill lines, and also of the seasoned industrials. Builleh sentiment shortly thereafter was stimulated of the seasoned industrials. Bullish sentiment shortly thereafter was stimulated by the court's approval of the American Tobacco company's disintegration plan and also by the granting of the injunction against the interstate commerce commission by the commerce court in connection with its ruling in the long and short haul cases. During the past few days, however, we have expressed the opinion that purchases should not be opinion that purchases should not be made on the upturns and that at least part profits should be secured on long stocks, basing our views primarily on the fact that the recent favorable occurrences stocks, basing our views primarily on the fact that the recent favorable occurrences had in great part, dissipated their immediate influences and that the contraction in the short interest had tended to greatly weaken the technical position of the market. There also has been in progress, as we intimated, selling of a rather influential character, in fact, distribution apparently has been conducted on such a scale as to warrant the conclusion, and especially in view of the convening of the Stanley investigation committee and congress, taken in connection with the rather more acute discussion relative to the political situation, that strong interests are not keen at present for much of a demonstration in the buying side and, therefore, we can only repeat that we would not purchase stocks except on the sharp drives and then only with using the usual safeguards.

sharp drives and then only with using the usual safeguards.
Gallacher, New York.—American Tobacco and United Cigar Stores were strong and active on the curb. There was some inside buying of both issues. American Tobacco sales from 440 to 453 and the United Cigar Stores from 233 to 251, last 245. El Paso actively traded in here today from 70 to 75c. The coppers slightly lower. Tonopah and Tintics steady and dull. Big Dome, the feature of the Porcupine group. It advanced from 352 to 274 on transactions of about 1500 shares. to 274

### GRAND CENTRAL AND VICTORIA DIVIDENDS

One in a position to judge says that the Grand Central company was scheduled to resume regular dividend payments this month, but President C. E. Loose was in the east at the time of the regular directors' meeting and the declaration was postponed until the December session. No statement as to the amount of this dividend is obtainable, but from the size of the cash surplus and the disposition of the officials some declaration can be expected next month. The Victoria directors will hardly declare a 1911 dividend. In the first place the company is paying off the purchase price of the Snowlake property, acquired several months ago, while the management is engaged in a development campaign which must be rounded out more perfectly before returning to the regular dividend list.

Underground conditions at the Victoria are very satisfactory, the strike of ore recently on the 1200 level going far towards demonstrating that the property will acon be one of the large Tintle shippers. There is a far greater extent of virgin ground within the Victoria lines than that portion prospected and it is of very great promise.

COMET PROPERTY IS

LOOKING BETTER In a message to the local owners of the Comet property of Idaho on Wednesday the mine superintendent reported that he had good-arade shipping silver and lead ore in both faces in drifting to the east and west. These drifts were started from the top of the raise, the raise heing sent from the tunnel level, and at the points of operation the management has at least 275 feet of vertical depth at its disposal. This mine is within five miles of Halley and the Sait Lakers in charge are more firmly of the opinion than ever that they have one of the fortunate 1911 discoveries of Idaho. The mine in past days was a considerable shipper of good ore.

### ARIZONA COPPER IS TO BE EQUIPPED

Engineer Llew Humphries Is Thirteenth Level Results Are Boston Broker Surprised at Dr. Ricketts Visits Scotland With Report of Needs

of Company.

explanation of the failure of D Greene-Cananea company, to reach Sal ake City the first of the month, expected. Hes in the fact that he left New York for Scotland at the time he was to have come west. His foreign mission is thought to be in behalf of the Arizona Copper company and the new reduction plants which have been under contemplation for some time.

Regarding tals matter. Thompson.

new rediction panes under contemplation for some time. Regarding this matter. Thompson, Towle & Co. have issued the following statement:

We understand from the west that the report of Mr. Ricketts is a favorable one which would indicate that in all probability it will be a matter of but a short time until the Arizona Copper property is equipped with modern reduction plants, the absence of which has long been a serious handleap to the com-

Considerable difference of opinion has existed regarding the proposed site for the new smelter. There seems now to be little doubt, however, but that it will be built below Clifton, near the Shannon smelter, which is apparently a much better location than on the table land near Clifton, which was advocated by some interested parties.

ter location than on the table land near Clifton, which was advocated by some interested parties.

The new smeller, as planned, will be composed of both blast and oil fired reverberatory furnaces with converter plant and will embody the latest metallurgical devices and improvements. The plant will have a greater capacity than the present smelter, and it is the intention to maintain production around 49,000,000 pounds of copper per annum, which compares with present production at the rate of approximately 32,000,000 pounds.

It is estimated that the improvements contemplated will call for an expenditure of approximately \$1,750,000, and, according to reports from abroad, this money will be very easily raised. In all probability this financing will be done by means of terminal bonds.

The company owns a very large area in the Clifton-Morenci district and production is derived from eleven mines. The orea are low-grade copper, some of the properties being of the dissominated porphyry type. A large proportion of the ores are concentrated, though some are smelted direct. It is claimed that large quantities of ore are in reserve, a semi-official estimate placing this at fully ten years' supply.

official estimate placing this at fully ten years' supply.

The Arizona Copper company, which is controlled by Scotch capital, has been an important producer of copper for many years. The present company was organized in 1884, but production was carried on for some years before this, for the Longfellow mine of the Arizona company holds the distinction of being the oldest important copper producer of Arizona, dating from about 1877. The present smelter was crected thirteen years ago.

### OFFICIALS GOING OVER CON. MERCUR AFFAIRS

Arthur W. Chesterton of Boston a director of the Consolidated Mercur Gold Mining company, and Director and General Manager George H. Dern left Wednesday morning for the property at Mercur to make an exhaustive examination of the premises. This visit may result in important innovations at the mine and reduction works of the company, but just what these will be must necessarily be determined by the directors before being made public.

It is not thought that the directors will consider the proposition of closing down operations as long as the management is making the profits now being earned. The September profits were in the neighborhood of \$5000, on a total production of about \$45,000 worth of bullion, and October doubtless will show equally as well. November is too young yet to tell what it will result in.

It possibly may be that important changes can be made, production costs reduced here and there in such a manner that earnings may be increased. If, by the installation of new equipment or a new department, a greater saving can be made the directors doubtless will

proceed along these lines should proceed along these lines should the underground conditions justify the ex-penditure. It is to be lioped that some-thing can be done to restore this old gold producer and dividend payer to something like its former usefulness.

Metal Market.

The metal quotations for Wednesday, posted by McCornick & Co., were as follows: Silver, 582c; lead, \$4.25; copper. \$12.30.

Schlitz was brewed first in a hut over sixty years ago. Now our output exceeds a million barrels a year. Our agencies dor the earth.

More and more people every year are demanding Schlitz-Schlitz in Brown Bottles

In our brewery we spend more on purity-in time-in skill-in money-than on any other cost in our brewing

We scald every tub, keg and barrel-every pipe and pump-every time we use it. We wash every bottle four times by machinery. Even the air, in which the beer is cooled, is filtered.

If you knew what we know about beer, you would? say, "Schlitz-Schlitz in Brown Bottles."

W. H. Bintz 265-273 S. Sti Salt Lake City S. 5th St. West,

## he Beer I hat Made Milwaukee Famous

GOLD BASIN VALUES HOLDING STRONG

In an article regarding the Gold Basin camp, of which the new town of Farrell will be a center, the Reese River Reveille

says in part:

"Conditions at the camp of Carroll continue to improve. The shaft on the property of the Gold Basin Mining company encountered water at the seventy-foot level. The presence of water has not altered the character of the ore not changed the values, which continue to be high grade shipping. Ore is coming from the camp to Austin for shipment to Salt Lake by every team that will take a load. The return from shipments here-tofore made have all been satisfactory.

"Progress at the shaft will be comparatively slow now, for a time, until the power holst is installed. This is being put in place."
